Permacolor™ Frame

ROSCO
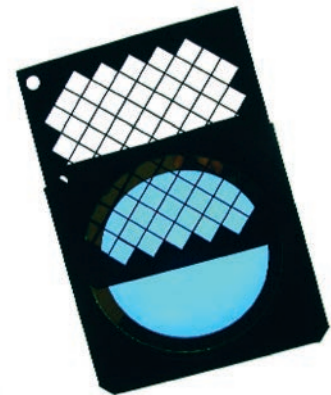

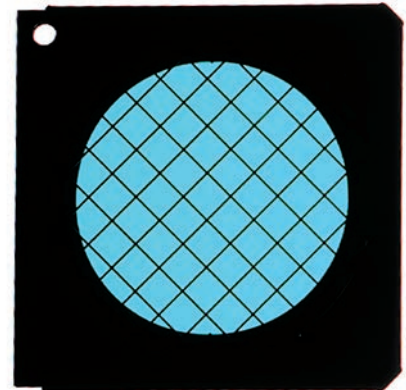

Metal frame with safety grid for glass color filters. Cold rolled steel frame with .5" aluminum grid, black powder-coated. 3/8" hole forsafety cable fastening frame to fixture.

The product consists of two pieces. Steel frame (glass housing) and aluminum safety grid. The aluminum grid slides into the three-sided, track-style steel frame.

Once safety cable is inserted into the 3/8" hole, the two pieces cannot be separated, preventing glass from falling out or being removed.

Rosco's Permacolor Safety Frame is available as a standard product in the three most widely used lens sizes. All models feature the slide-in aluminum safety grid.
